

## **CLM launches its first 100% online medical software**

The latest product in the CLM line, monLogicielMedical.com®, is a flexible solution offering easy access for medical practices keeping pace with a changing world.

**Paris, January 10, 2012** – [Cegedim Logiciels Médicaux \(CLM\)](#), software publisher and service provider to the medical sector, is enhancing its medical software offering with the development of an innovative 100% web solution, christened monLogicielMedical.com®. The online software is notably suited to doctors working in multiple locations, in a group practice or a remote office, and should appeal more generally to those looking for a solution that is flexible and easy to use, such as young physicians.

While 70% of new doctors starting out today favor a salaried position, another 20% prefer to work as substitutes and 9.4% as independent professionals. The last group increasingly prefers to work in group practices, notably to reduce administrative burdens and financial management (French National Order of Physicians data: *Atlas of French medical demographics, 2011*). At present, 28.4% of general practitioners and 16.6% of specialists already work in group practices (source: DREES, “Physicians at 1 January 2011”). Multi-site work is on the rise, notably among specialists.

These trends are likely to increase demand for flexible IT solutions in which physicians manage a patient base from different sites, allowing user configurations that can be adapted to the specialties and preferences of different doctors within a single practice.

### **All the advantages of secure web services**

With monLogicielMedical.com®, CLM offers medical practice management without technical constraints: the physician has nothing to install and connects with just a login/password; the software is always up to date and backs up data automatically. The software is also suited to new ways of practicing medicine, is accessible from any professional location or from home, is suited to every kind of specialty, and can be personalized to match the preferences of multiple users.

monLogicielMedical.com© is hosted in a Certified Health Data Hosting (HDS) environment and ensures secure access, including authentication using the Health Professional Card (CPS).

### **Principal functionalities**

- Access by specialty with dedicated medical content
- Create and enhance medical records with or without Carte Vitale
- Consultation assistance forms
- Secure prescriptions with BCB®, the first medication database certified by the HAS
- Lab results module (HPRIM certified)
- Document management module
- Messaging among physicians
- Secure role-based access (practice supervisor, health professional, administrative personnel)

“We pay particularly close attention to trends in medical practices. We do all we can to anticipate them and meet changing needs with solutions that perform to physicians’ expectations. Our 100% web solution is thus an excellent addition to a software range known for its rich array of functionalities and flexibility,” noted Jean-François Magne, CLM Sales and Marketing Director.

*About Cegedim  
Logiciels  
Médicaux (CLM):*

Medical software publisher and service provider CLM is the leader in physician computerization. Attentive to health professionals, its teams develop and market solutions for the day-to-day needs of medical practices. In a constantly changing environment, notably with respect to the make-up of the medical profession and the way care is organized, CLM software (Crossway, MédiClick and DocWare) ensures healthcare professionals flexibility and scalability, allowing them to pick the solution best suited to their specialty, user preferences (Mac® or PC, classic or web-based, configurable interface, etc.), and type of practice (independent, group, multidisciplinary group, healthcare center or network, etc.). Structured and communicative, CLM software solutions are compatible with the performance-based pay instituted by the new national medical care agreement, which took effect January 1, 2012: electronic sharing of care forms, direct access to remote services, certification for the DMP (French Personal Medical File), and certification for prescription assistance software.

CLM has a staff of 150 employees, of which more than 100 are in regional cities, where they can work closely with client physicians.
