

PRESS RELEASE

IS security, managed services, and hybrid cloud

IGN chose **cegedim.cloud** to host part of its information system and manage certain applications

Boulogne-Billancourt, May 14, 2020

Through a public tender, the **Institut National de l'Information Géographique et Forestière (IGN, the National Institute of Geographic and Forest Information)** chose private cloud hosting specialist **cegedim.cloud** to host its cloud and manage some of its applications.

IGN compiles and shares reference data on France's geography and forests to fulfil its mission of describing the country's territory. It also manages an up-to-date inventory of the country's forest resources.

After conducting a public tender for cloud hosting and managed services, IGN chose the expertise of **cegedim.cloud** for:

- The roll-out of a **public/private hybrid cloud** for resource provisioning and management using a graphical user interface and an application programming interface;
- Keeping platforms up and running;
- **Secure managed services** for a portion of the services and applications.

cegedim.cloud's teams are also advising IGN's IT team as they **build a new cloud infrastructure** and training them how to run and administer their environment.

Information security and digitalization

IGN supports public-sector entities by supplying analysis of the territory to help them implement land-use planning and sustainable development projects.

cegedim.cloud's widely recognized and certified expertise in information security—the company is ISO 27001, ISO 27017 and ISO 27018 compliant—helps clients adhere to State IS security policy, personal data protection laws, and Référentiel Général de Sécurité (RGS) guidelines.

By building this infrastructure for IGN, **cegedim.cloud** has demonstrated that it is capable of executing **hybrid cloud solutions** (public/private) in any sector.

Frédéric Le Guillou, **CIO of cegedim.cloud** said, "The entire **cegedim.cloud** team is proud to be working with IGN on this change process, made possible by a nimble organization focused on Services and Security."

About cegedim.cloud:

Cegedim's **cegedim.cloud** brand offers a unique array of cloud services for hosting critical applications and sensitive data: comprehensive outsourcing, managed platforms, platform as a service (PaaS), on-demand virtual servers, infrastructure as a service (IaaS), and colocation (private space in one of Cegedim's datacenters). **cegedim.cloud** is the IT hub of Cegedim Group, France's fourth-largest software publisher (Truffle100 2019 ranking) and leading healthcare software publisher (Truffle100 and Syntec Numérique rankings). It has nine datacenters, including four in France. The rest are located in the US, Europe, and Asia. The company has more than 300 private clouds and 120 employees, all of which it uses to maintain the availability of its clients' critical applications and the confidentiality of its 400,000 daily users' sensitive data.
